EasyWeb Demo

Bao Trinh

What's EasyWeb?

- EasyWeb: an open framework simple the process to create and run websites easier

- Easywebhub: An open framework to connect between the website makers' community and customers

    - the front-end designer community who design, create the front-end (HTML, CSS, JS) of website

    - the developer community who provide business packages through API services

- Every website could be converted to EasyWeb, no matter it's framework such as PHP, .Net, Java, …

Use EasyWeb

- ❖ new websites:

  - ❖ choose website templates from EasyMarket

  - ❖ add own content and deploy

- ❖ current websites:

  - ❖ convert layouts to EasyWeb, replace the old one

  - ❖ convert modules to api services and integrate into layouts

DEMO: new Websites

* demo video: https://youtu.be/ulunM-vufe8

* **Preview**: your website locally

* **easyCMS**: click and edit content on pages

* **1-click Deploy**: to publish on your site

* see https://easywebhub.com for details

DEMO:
Existing Websites I

- clone layouts of existing website

  - home page and detail pages of www.theverge.com

- define content structure (json schema)

  - field name, type, format, …

  - nested fields, a field of an object

- display content on layout

  ==> **Easy to do with every one**
